CAREER OBJECTIVE

A passionate Computer Science undergraduate with hands-on experience in full-stack web development and a strong foundation in DSA and Object-Oriented Programming. Constantly exploring new technologies, sharpening problem-solving skills through competitive programming, and building real-world projects that solve meaningful problems. Eager to grow through challenging internship opportunities and contribute meaningfully to innovative software development teams.

TECHNICAL SKILLS

Languages: Java, JavaScript, C
Web Technologies: HTML5, CSS3, Tailwind CSS, Bootstrap
Tools & Platforms: Git, GitHub, VS Code
CS Fundamentals: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Operating Systems

EDUCATION

B.E. in Information Science & Engineering | *Ramaiah Institute of Technology (MSRIT), Bengaluru* | 2024 – 2028

- Current CGPA: 9.13
- Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Discrete Mathematics, Database Management Systems.

PROJECTS

Kannada Sentiment Analysis — Hybrid ML Model — *Python, MuRIL BERT, Scikit-learn, Streamlit* *Live Demo*

- A Kannada emotion detection AI built using a hybrid MuRIL BERT + TF-IDF ensemble model achieving 93% accuracy across 6 emotion classes (happy, sad, angry, fear, disgust, neutral), structured with an agent-based architecture (Data Agent, Feature Agent, Training Agent, Evaluation Agent, Prediction Agent) and deployed live as an interactive web application on Streamlit Cloud.

Crowd Mapper — *HTML, CSS, JavaScript, Node.js* *Live Demo*

- A full-stack web application developed during the Whackiest 24-Hour Hackathon integrating frontend, backend, and database functionalities for real-time crowd monitoring and mapping.

TaskIt — Task Manager — *HTML, CSS, JavaScript* *Live Demo*

- A priority-based task management web app for teachers featuring task categorization, search & filter, priority queue implementation using DSA concepts, and both list & grid views.

Amazon Clone — *HTML, CSS, JavaScript*

- A pixel-accurate front-end clone of the Amazon e-commerce website, showcasing strong HTML/CSS layout skills, responsive design, and JavaScript interactivity.

FloatChat — Argo Ocean Data Discovery Platform — *HTML, CSS, JavaScript, Leaflet.js* *Live Demo*

- An ocean data discovery web app built for Smart India Hackathon featuring an interactive Leaflet.js globe with live Argo float tracking, a conversational chatbot, multi-role access (Explorer, Navigator, Researcher), and real-time safety alerts.

AWARDS & CERTIFICATES

- Top 20 Teams — Whackiest 24-Hour Hackathon, MSRIT (2024): Developed a full-stack application, CrowdMapper, competing against numerous teams.
- 2× Prize Winner — MSRIT College Tech Fest: Recognized for outstanding performance in technical competitions, reinforcing competitive and engineering abilities.
- ChatGPT Prompt Engineering for Developers – DeepLearning.AI (Andrew Ng & Isa Fulford)
